

**RACE TUNING INFORMATION**

**Subject**

The following modifications increase and extend the powerband, and improve throttle response making the vehicle more competitive for the experienced racer.

**CAUTION**

**Kawasaki cannot accept any responsibility for the results of the modifications described in this bulletin.**

**Whenever the power output of an engine is increased, the reliability and durability of the engine decrease. This is especially true of competition engines, which are highly stressed even in stock form.**

**For best results, engine modifications should be made by an experienced engine tuner.**

**Modification Procedures**

**Cylinder:**

The following modifications increase midrange and high speed power while retaining low speed power.

Grind and smooth the dotted areas in the intake, exhaust, and scavenging ports (the areas in each port near the cylinder bore in particular).

Chamfer the exhaust port and sub-exhaust ports.

Chamfer the intake port.

Adjust the scavenging port timing.

- 1. Exhaust Port
- 2. Sub-exhaust Ports
- 3. Scavenging ports
- 4. Sub-scavenging ports
- 5. Intake port
- 6. Sub-intake ports

**Flywheel Magneto Rotor (Optional Parts)**

Four (4) optional rotors are available. The standard flywheel can be substituted with one of those in the chart to better suit track conditions.

Select one of them according to the table.

**Table of Inertia Moment**

| Part Number | Inertia Moment (kg-cm <sup>2</sup> ) | Riding Conditions            |
|-------------|--------------------------------------|------------------------------|
| 21007-1402  | 4.5                                  | Increase throttle response   |
| 21007-1403  | 4.9 (STD)                            |                              |
| 21007-1404  | 5.3                                  |                              |
| 21007-1405  | 5.6                                  | Increase rear wheel traction |
| 21007-1413  | 5.9                                  |                              |

**Spark Plug:**

Use the recommended racing spark plug.

| Spark Plug    | Part Number |
|---------------|-------------|
| R7376-8 (NGK) | 92070-1275  |

**NOTE:**

- o Use a racing fuel with Research Octane Number (RON) 105 or higher, to help prevent abnormal combustion caused by the increased compression pressure from this modification.

**CAUTION**

Maintain the original shape of the ports, and chamfer the sharp edges to prevent ring damage.  
 Removing more material than specified may result in a loss of power.

**Cylinder Head**

Cut 0.1mm from the gasket surface of the cylinder head to raise the compression ratio.

**Main Exhaust Valve**

Remove material from the center of the main valve holder (Fig.5). Removing material from the main valve holder and chamfering the main exhaust port improves fuel flow.

**Combination Chart for Compression Ratio**

|                      | Cylinder Head                 | Head Gasket         | Main Valve              | Compression Ratio |
|----------------------|-------------------------------|---------------------|-------------------------|-------------------|
| Compression Ratio UP | 0.1mm Cut from Gasket Surface | T=0.26 (11004-1240) | Main Valve Modification | 9.2: 1            |

### CAUTION

Use of leaded fuel is illegal in some countries, states or territories. Check local regulations before using leaded fuel.

### Optional Carburetor Jet Needle and Throttle Valve Cutaway

The optional carburetor jets for the '02 KX250-L4 are listed on this page.

### Warranty Information

This bulletin is racing support information only, not warranty authorization.

## Carburetor Setting and Optional Parts

'02 KX250-L4

1) Base Setting

| Markets | Carb Body Type | MJ   | PWJ | JN     | CA                | SJ  | AS    | NJ     |                    |           | BPP | POP  | BP   | PO   | ID Mark |

| 16187-1163 | H       | •2.725 | 27.60          | 31.40          | 47.40          | 0°45'58"       | 1°34'40"       | 3°0'0"         |                          |

NAL is richer than NAF (0.5 Clip Position).

3) CA Optional Parts

| P/No.      | Number       | Remark |
|------------|--------------|--------|
| 16025-1217 | # 8(2.5×1.5) | STD    |
| 16025-1215 | # 6(2.5×1.5) | OP     |
| 16025-1216 | # 7(2.5×1.5) | OP     |

## 4) PWJ Optional Parts

| P/No.      | Number | Remark |
|------------|--------|--------|
| 16159-1059 | # 42   | OP     |
| 16159-1060 | # 45   | OP     |
| 16159-1058 | # 48   | STD    |
| 16159-1053 | # 50   | OP     |
| 16159-1055 | # 52   | OP     |

**NOTES**

AB is the Air Bleed: the size is of the hole in mm. The position is countered from the upper to the lower.

BPP is the Bypass Pitch: the distance in mm from the center of the main nozzle to the center of the Bypass hole.

POP is the Pilot Outlet Pitch: the distance in mm from the center of the main nozzle to the center of the Pilot Outlet.

BP is the Bypass: the size of the hole in mm.

PO is the Pilot Outlet: the size is in mm. The upper number is the size of the hole into the carburetor throat in mm. The lower number is the size of the hole into the fuel passage.
